**MIAMI - April 18, 2022 - PRLog** -- All Diesel motors have their issues; Vehicles that do a lot of stop and go driving suffer the most. Ambulances-EMS, Coach Buses, School Buses, Sanitation and delivery trucks require the most maintenance. All diesel motors since 2007 experience Forced REGEN Cycles, it can burn/waste 8-10 gallons of fuel every REGEN cycle.

For years the primary way to clean a Diesel Particulate Filter has been to have it cleaned in a Kiln/Oven at 1,800 degrees. After a few cleanings the ceramic filter may crack and the filter needs to be replaced. A new OEM DPF Filter is expensive, \$2,500+. Using the no heat Cobra Clean method only costs +/- \$85, without causing damage.

The Biodegradable CobraCleanUSA is a Biodegradable Non Toxic, Non Acidic cleaner that melts Carbon and the Soot that gets trapped in Filters (DPF, EGR, SRG). The cleaning process is easy, remove the filter, place it submerged in CobraClean for 24 hours. Remove it, rinse it, dry it, reinstall it, and you're back on the road.

To date filters have been cleaned multiple times and still come clean, without damage. The cost to clean a DPF is 75% less (\$85) than heat cleaning a DPF. The CobraCleanUSA cleaner cleans anything with carbon on it, SRG-STG Air Filters, EGR Valves and Coolers as well.

A solution to reducing Diesel REGENERATION Cycles and Particulates +/-70% is the Guaranteed ECOFuelMax No Chemical, No Maintenance Solution. By increasing fuels combustibility it causes it to burn cleaner Reducing Carbon Pollution and Particulates. Many report a +/-10% fuel savings.

Go online at YouTube and see the latest CobraCleanUSA video. Anyone interested in more information about reducing Maintenance Expenses and Downtime go online (<https://ecofuelmax.com/>), call or email us. GO GREEN – Burn Clean!
