People are asking what is Cobra Clean DPF Cleaner – ECO Fuel Max

April 19, 2018

New Release, Cobra Clean a Biodegradable Non-Toxic, Non-Acidic carbon cleaning solution. Safe to use on metal, plastic and paint. Melts Carbon and Oil.

Until recently the way to clean a Diesel Particulate Filter was to heat it up in a Kiln at 1,800 degrees. Burning a DPF has proven to damage the ceramic filter median; in most instances a DPF may need to be replaced after a few cleanings. A new DPF is expensive \$2,500 - \$4,000 plus labor. A DPF cleaned with Cobra Clean is not damaged and can be cleaned many times.

Cobra Clean will not damage what it comes in contact with. It is a proven superior way to clean a DPF, EGR Valves and EGR Coolers. A dirty DPF can be cleaned in 24 hours for approximately \$85.00, that's 75%+ less than burning them in a kiln at 1800° for \$350-\$500. The cost to clean an EGR is +/- \$1.00 (replacement cost \$350-\$500) and a EGR Cooler +/- \$5.00 (replacement cost \$1,100-\$1,500).

Cobra Clean is simple to use, put a DPF filter in a bucket, totally submerge it in Cobra Clean for 24 hours, rinse the soot out with tap water, dry and reinstall it. Now Companies and individuals can clean their Diesel Particulate Filters in house and reinstall them in one day. Save money and downtime, many are turning to the ECO Fuel System to keep their DPF's clean. With the ECO Fuel Filter the fuel burns more volatile and cleaner. Less un-burnt carbon or soot to get trapped, less maintenance and improved efficiency.

Anyone interested in reducing costs and increasing their efficiency should compare Cobra Clean to their current methods. Take the Cobra Clean Challenge and GO GREEN! For more information call or go online to CobraCleanUSA. GO GREEN – Burn Clean!
