

Truckers in Florida Saving Fuel, Maintenance and Downtime – ECOFuelMax.com

The ECOFUELMAX (aka ECO Fuel System) has caught on in Florida. Truckers are saving +5%-10% in fuel, saving thousands of dollars. The ROI is +/- 20 days for over the road Trucking vehicles.

ORLANDO, Fla. - Sept. 19, 2023 - *PRLog* -- The ECO for over 10 years has been helping Transit Buses, Heavy Equipment, Autos and Trucking save Fuel without Chemicals, Electricity or Maintenance. It works on the principle of Electrostatic Energy (electrolysis). By causing Fuel to burn more combustable and cleaner it burns more efficiently.. BBB A+ Rated 10+ years, Guaranteed, it can last 20+ years.

The push is for Electric Cars to reduce pollution. The ECOFuelMax Pollution Solution can reduce Emissions and Greenhouse Gases +/-70%, TODAY. A cleaner burning fuel not only releases less pollution but reduces Fuel consumption. It may take decades for Electric vehicles to be implemented. Our government is spending Trillions of Dollars to force us to go Electric. Inflation is rising due to higher fuel costs.

Why not do both, reduce pollution today on existing Petroleum vehicles until charging stations are available and Electric vehicles are more efficient? Are you aware that more Carbon Pollution and NOx gases are released making Electric Lithium Batteries than a Petroleum vehicle releases in 3 years?

Electric Transit Buses in warm/hot climates need to install diesel generators to run the Air Conditioners on their Buses due to the drain on Electric batteries. Electric Vehicles that drive short distances work fine.

With the price of Fuel rising once again it is time for conventional vehicle owners (Gas-Diesel) to take action and utilize a BBB A+ Guaranteed No Risk solution to help them Reduce Expenses.

To do a No Risk test, ask for details, go online (<https://ecofuelmax.com/>), or call and speak to a real person.

GO GREEN Burn Clean!
