

Clean your DPF – Diesel Particulate Filters DIY without heat damage for 75% less CobraCleanUSA

School Systems, Municipalities Government agencies and Private Trucking Companies are saving money and downtime using the Non Acidic, Non Toxic Biodegradable Cobra Clean Biodegradable cleaner.

By: [ECO Fuel Systems, LLC](#)

ALBANY, N.Y. - March 10, 2021 - PRRLog -- Cobra Clean has only been available for a few years and has caught on fast. Diesel owners need their vehicles and hate downtime. Now owners can clean their own DPF's in house in just one day.

Solution, CobraCleanUSA is a Biodegradable Non Toxic, Non Acidic cleaner that melts Carbon and the Soot that gets trapped in a Diesel Particulate Filter (DPF). The cleaning process is easy, remove the filter and place it submerged in CobraClean for 24 hours. Remove it, rinse it, dry it, reinstall it, and you're back on the road.

Vehicles that do a lot of stop and go driving suffer the most. Ambulances-EMS, Coach Buses, School Buses, Sanitation and Delivery Trucks require the most maintenance. All diesel motors since 2007 go into a Forced REGEN Cycle to help keep a dirty filter operating. A Forced REGEN Cycle can burn/waste 8-10 gallons of fuel each REGEN cycle.

The CobraCleanUSA simple Low Cost solution helps keep DPF's to last longer. In most cases Diesel Particulate Filters are baked in an oven or kiln at +/-1,800 degrees. Unfortunately after a few cleanings the DPF cracks and needs to be replaced. The cost for a new DPF is \$2,300 to over \$4,000.

Using Cobra Clean a Biodegradable solution will NOT damage a DPF filter. To date filters have been cleaned eight times over five years and still come clean, without damage. The cost to clean a DPF is approximately \$85.00. The CobraCleanUSA cleaner can clean EGR Valves and Coolers as well.
