

Diesel Emission Fluid DEF can be Reduced by Reducing Carbon Pollution/Particulates – ECOFuelMax

Positive reports keep coming in. The ECOFuelMax Pollution Solution has shown to reduce DEF use and DPF maintenance by +/-70%. Help reduce Greenhouse Gases while saving +/- \$3,000 annually.

By: [ECO Fuel Systems, LLC](#)

BOCA RATON, Fla. - Sept. 22, 2020 - PRRLog -- Yesterday the owner of a 2012 Ford F250 diesel informed us that he has gone over one year without adding any DEF fluid. The truck is used to transport mobile homes and large boats across the country. The overjoyed owner had to call and report that his less than \$400 investment has more than paid off.

In addition to individuals working to reduce Carbon Dioxide pollution cities and counties across the USA in over 200 School Districts, hundreds of Coach Buses and large Trucks are saving over \$3,000 per year in maintenance, fuel savings and downtime.

The ECO Fuel System has been successfully helping those who utilize it for over 10 years. On vehicles like buses, waste vehicles, heavy equipment and over the road trucks the reduction of 40% to over 70% in REGEN Cycles has made many a believer. The US Army uses it to reduce the black smoke released from their tanks. NASA as well as Homeland Security use it on their Border Patrol vehicles in Texas.

Those who resist ask why doesn't the manufacturer incorporate such a device that requires no motor modifications or maintenance. The answer is simple, money. By reducing vehicle maintenance potentially billions of dollars in replacement parts would be compromised. As diesel owners are aware, a new Diesel Regeneration Filter's replacement's cost ranges between \$2,300 to over \$3,500 each. EGR Valves range in price from \$350 to over \$800.

Finally due to the recent Pandemic and viewing cleaner air by people staying home, individuals, companies and municipalities have been installing this low cost pollution solution. The ECO is an opportunity until such time if ever we convert to electric vehicles. The time to act is now! The ECO solution is here now and can be easily installed on any vehicle, Diesel, Biofuel, Gasoline or CNG for only a few hundred dollars, no warranty issues.

Those interested in saving money while reducing Carbon Pollution using a Guaranteed to work opportunity can call or go online to acquire more information. The ECO Fuel System <https://ecofuelmax.com> and its principals for over 20 years have been working to reduce pollution while increasing efficiency. GO GREEN Burn Clean!
