

DPF Cleaning for 75% less NO HEAT CobraCleanUSA – ECOFuelMax

Thousands have learned about CobraClean, a simple easy to use Low Cost solution to clean DPF's without damaging them with heat.

MIAMI - April 7, 2022 - [PRLog](#) -- Older vehicles and vehicles that do a lot of stop and go driving suffer the most. Transit, School Buses, Ambulances-EMS, Sanitation and Trucks require regular maintenance. Since 2007 Diesel Particulate Filters (DPF) were required (EPA) to trap Carbon Particulates on all Diesel motors. A Diesel Regeneration Cycle (REGEN) can burn/waste 8-10 gallons each REGEN cycle.

For years the primary way to clean a Diesel Particulate Filter was to have it cleaned in a Kiln/Oven at 1,800 degrees. The cost ranges from \$350 to over \$500 per filter. The problems most experience is after a few heat cleanings the ceramic filter cracks and the DPF filter needs to be replaced. It is an expensive problem +/- \$2,500.

Now using the low cost Biodegradable cleaning solution Cobra Clean you can melt carbon in a DPF, DOC or EGR Valve. The cost to clean a DPF using a Biodegradable Non Toxic, Non Acidic cleaner is +/- \$85.00.

The cleaning process is simple, remove the filter and place it submerged in CobraClean for 24 hours. Remove it, flush it with tap water, dry it and reinstall it. Testing has shown a DPF cleaned multiple times removes +/- 97% of the trapped Carbon. Those who have experienced Turbo problems and the DPF was clogged with oil and a heat cleaning wouldn't clean it can clean their DPF with Cobra Clean, it may require a longer than a 24 hour soaking period.

Want to save Fuel and reduce the Carbon Pollution/Particulates (+/- 70%) that clog a DPF check out ECOFuelMax. The ECO (BBB A+, 10+ yrs.) is an inline Fuel Filter/Enhancer that works on the principal of Electrolysis helping fuel to burn cleaner and more efficiently, No Risk-Guaranteed.
