

Pollution and Politics True or False – ECOFuelMax

With the elections upon us, are Politicians all talk, or do they have a plan. For years they have ignored opportunities, proven solutions, or have put together a viable plan, Why not!

FT. LAUDERDALE, Fla. - Oct. 20, 2020 - [PRLog](#) -- Democrats state electric vehicles are the way of the future. How much Pollution is created to produce electricity? Is electric viable for Trucking and Transport vehicles?

Republicans in a majority of instances reject that there is a problem. They have been steadfast on what has been running our country for over a century. Fossil Fuels have proven to work, they are now destroying our environment. Everyone knows of someone who has or had Cancer, Breathing disorders or a Heart condition. Scientists estimate that over Seven Million (7,000,000) untimely deaths are related to Pollution.

All parties are aware of the ECOFuelMax Pollution Solution System. Those who have tried the low cost opportunity is proof that it works. The ECO has been instituted in over 200 School Districts in Texas, Homeland Security, NASA, and the US Army use it. Foreign Nations have been far more receptive and have been actively utilizing it.

The USA has +/-4% of the world's population and is responsible for over 20% of the world's Pollution. The result of our powers to be ignoring a solution has cost us many millions of dollars. A Truck can save in excess of \$5,000 and a Transit Bus can save in excess of \$3,000 annually.

Every excuse and objection has been presented against taking action. What about the millions of tons of Carbon Dioxide that is being released into our environment? Why won't the US Government, Municipalities, Trucking Individuals and even large companies like Amazon who claim to be proactive adopt a proven guaranteed simple solution until a zero emission solution can be enacted? Apparently +/-70% may not be enough, why not act on the current problem?

There are many external influences that do not want to reduce pollution, it's called profitability. Time is running out, when the cost on average per vehicle (all fuel types) to reduce Pollution is less than \$400 what are we waiting for? The ROI for a full sized over the road Truck is less than 10 days; a Transit Bus less than 20 Days, Heavy Equipment less than 10 days and a Passenger vehicle is less than 4 months, depending on vehicle use. Bottom line by making fuel burn cleaner all motors run more efficiently and require less maintenance.

The ECO Fuel System LLC and its principals have been working since 1999 to help reduce Carbon Pollution and Operating Expenses. The time to act is NOW! For information, to order or do a No Risk test on you fleet, email, call or go online <https://ecofuelmax.com/>. GO GREEN Burn Clean!
