

Carbon Dioxide Pollution, why are we Failing to Act – ECOFUELMAX.com

With the Presidential elections upon us many claim a need to reduce Carbon Dioxide Pollution. Few have been proactive, what are they waiting for? Health organizations claim that +/- 7,000,000 deaths annually are attributed to Pollution.

FT. LAUDERDALE, Fla. - Sept. 8, 2020 - [PRLog](#) -- Our focus is on Governmental and Municipal agencies. Many claim they are doing research trying to determine the best practice to follow. After years of research and talk few have taken action. One party claims 100% reduction will only work, the other claims it may affect our economy. What if you could reduce Carbon Pollution/Particulates +/-70% and save money doing it?

For over 10 years NASA, Homeland Security and the US Government have tested and have been using the ECO Fuel System Pollution Solution. Unfortunately, due to regulations Governmental agencies are not allowed to endorse any products.

Multiple private companies as well as Municipalities and School Systems primarily in Texas for over 10 years have been successfully reducing Carbon Pollution 40% to over 70%. By reducing black smoke and particulates a diesel motor omits it has proven to reduce maintenance expenses and downtime. Homeland Security states a 3% fuel savings on their gasoline vehicles. Truckers love it; they reduce DPF maintenance while saving +/-5% in fuel consumption.

For a few hundred dollars per vehicle, owners can increase the vapor pressure in all fuels causing it to burn more combustible and cleaner. Until such time a feasible cost efficient solution is incorporated our dependence on the internal combustion motors and fossil fuels shall continue. What's wrong with financially benefiting from reducing Pollution?

It is time for Individuals, Municipalities and Corporations to incorporate a proven solution, Scientists say our future depends on it. As can be noted during the Coronavirus stay at home restrictions everyone noticed a substantial improvement in air and water quality.

Recently the news media has asked if vendor influence has restricted the incorporation of a positive solution. Based on the facts that a Coach Buses maintenance can be reduced in excess of \$3,000 annually makes one think. Reporters may be already looking into the matter.

Most are talking about taking action, when is the American public, School Districts and Municipalities going to take action? Today there is a guaranteed low cost proven opportunity available that can reduce Carbon Emissions and Greenhouse Gases. If it can pay for itself in savings, what are you waiting for? Many Certified Reports are available, just ask.

The ECO Fuel System's principals for over 20 years have been dedicated to reducing Pollution and Maintenance expenses. Those interested in learning more: call, email or go online <https://www.ecofuelmax.com>. GO GREEN, Burn clean with the ECOFuelMax Pollution Solution.
