

Build Back Better BBB 2 Trillion Dollar Pollution Reduction – ECOFuelMax.com

Not many know what the Biden Build Back Better Plan is. Some think it is to reduce Pollution others think it is a welfare entitlement grant.

By: [ECOFuel Systems, LLC](https://ecofuelmax.com/)

BOCA RATON, Fla. - Dec. 6, 2021 - *PRL*og -- Both are correct, 555 Billion is allocated for Carbon Pollution.. Many Politicians claim the remaining funds will not be allocated to Pollution.

As a concerned citizen, for years I have been watching and actively involved in helping lower Greenhouse Gases. The President's plan to lower Carbon Emissions 50% by 2030 is already available!. Should our leaders spend Trillions foolishly?

For 10+ years several proven products like the ECO Fuel System that our Government uses has been tested and has far surpassed Biden's 2030 wish list. It does not cost Billions. The USA and

other countries know about and use the ECO to reduce Carbon and Greenhouse Gas Emissions +/-70% without Electricity or Chemicals, No Maintenance is needed. It works on the Principal of Electrolysis, on all fuels. Our Government and cities have been successfully using it for years. There are 200+ School Districts with over 30,000 Yellow School Buses who use it daily, 10+ years. The goal was to have Students breathe cleaner air; the shocking benefit was Municipalities saved +/- \$3,000 in maintenance expenses annually per bus by reducing Pollution. The cost was only \$399 ea. and can last 20+ years, no risk.. Should the Government be using TAX Dollars when they have a a known opportunity, Today?

Our Political Green New Deal advocates have a common platform but may be misleading the Public. President Biden and Senator Sander's want to install +/-550,000 electric charging stations across the USA. Great for job creation but, there are only +/-270,000 electric vehicles on our roads today. Lowering the Carbon Pollution/Particulates is needed today. Foreign Countries are ordering the Made in America ECO System by the thousands.

A short story, I was speaking with a North Dakota Fleet manager who has been a customer for years. He informed me last week that his Municipality was granted 15 Million Dollars to buy Electric buses. He was amused that our Transportation leaders were unaware that Electric vehicles lose 40% of their power in temperatures less that 40° Fahrenheit. Temperatures less that 20°, electric vehicles may not operate at all. He informed me Temperatures in N. Dakota drop as low as 27° below zero. Over 50% of the USA during the coldest winter months experience temperatures less that 40° Fahrenheit.

We the American Public and Businesses need to act or be facing more increases in Transportation Expenses and restricted movement. Improving Electric or other low pollution alternatives may take time to properly implement. You can Reduce Pollution and Maintenance Expenses TODAY! No Risk! For information go online (<https://ecofuelmax.com/>), call or email. GO GREEN – Burn Clean!
