

Large Trucking – Transport Companies Saving Fuel by Reducing Pollution – ECOFuelMax.com

FT. LAUDERDALE, Fla. - May 18, 2023 - [PRLog](#) -- Large Diesel Trucks are responsible for transporting and carrying heavy payloads, most travel more than 300 miles per day. Electric vehicles are unable at this time to carry heavy loads or travel more than 300 miles.

Positive minded Media Anchors have stated, if a Company could invent a product that could reduce Carbon Pollution and Greenhouse Gases on petroleum motors it could be a lifesaver. The ECO Fuel System is a Proven, Guaranteed solution to Reducing Carbon Pollution/Particulates and saving fuel (+/-10%).

The ECOFuelMax Pollution Solution, aka ECO Fuel System operates based on the principle of Electrostatic energy or Electrolysis. By increasing the Reid Vapor Pressure in all fuels it increases combustibility causing fuel to burn cleaner and more efficiently. The cost is only a few hundred dollars, depending on motor size. It requires NO Chemicals No Maintenance, or Motor Modifications, No Warranty issues; it only treats fuel and can last 20+ years.

Just today, we received communications inquiring how it worked, what the ECO could do and how much did it cost. My first answer was the ROI on a large Diesel Transport Truck was less than 20 days; the total cost was less than \$600 (US). A Municipal Transit Bus the ROI is less than 25 days, the total cost is less than \$500 (US). Click here for [How it Works and a Whitepaper Report](#) by a developer of the DPF and Catalytic Filter.

Truckers are ecstatic, saving +/-5% in Fuel, +/-40% in DEF and +/-70% reduction in DPF Maintenance. By reducing Carbon Pollution/Particulates +/-70% a Diesel Motor's REGENERATION Cycle can be substantially reduced. By reducing Pollution Maintenance Expenses, Downtime and Fuel Consumption Truckers, Cities, States, the Federal Government, and all Diesel and Gasoline Owners can save thousands of dollars annually per vehicle.

Government agencies like NASA, US Border Patrol/Homeland Security, Municipalities and School Districts (38,000++ Buses) have all been using it for +/-10 years. [Click here](#) to see who uses it. Ask your political leaders why haven't they informed the Public?

There are multiple Certified Test results to validate the ECO Fuel System. Like a [Government Grant funded Test](#) showing a reduction of Carbon Pollution & Greenhouse Gases of 40% to over 70%. Why has it been kept a secret, who doesn't want to Save Money?
