

## Why does the Public and Cities refuse to Save Tax Dollars by Reducing Carbon Pollution & Green

Tens of Thousands of Individuals and Governments around the world have been saving Money by Reducing Greenhouse Gases for over 10 years!

By: [ECO Fuel Systems, LLC](http://ecofuelsystems.com)

**BOCA RATON, Fla. - April 25, 2022 - PRL** -- Politicians state they want to reduce Carbon Pollution 50% by 2030. For over 10 years the US Government has been aware and has been successfully using the ECOFuelMax (ECO Fuel System) to reduce the black smoke and Greenhouse Gases.

**Reduce Pollution**

**Reduce Greenhouse Gases**

**Reduce Fuel Consumption**

**Reduce Maintenance**

**Reduce Downtime**

**Save Money \$\$\$\$\$\$**

Is it a financial ploy for leaders to capitalize on their investments? The ECO Fuel System is one of many privately owned companies working to reduce Pollution. Why hasn't the politicians promoted cleaning the air on existing fueled vehicles using proven systems they are aware of? Electric vehicles are not bad. Slowing or stopping the production of Fossil Fuels has caused inflation that has not been seen in decades. How many poor political leaders have you heard of?

Will Political leader's current actions reduce Carbon Pollution 50% by the year 2030? Most disagree Electric Vehicles are too costly for most people. Why won't Political Leaders utilize existing technologies that are proven and guaranteed solutions? Fact; a vehicle of any size can reduce the Pollution it omits 40% to over 70% TODAY? We can still work on Electric transportation.

Without question Greenhouse Gases are affecting our lives, Cancer, Heart Disease, Breathing and Skin disorders to mention a few can all be attributed to Carbon Pollution.

Several City and Municipal government agencies are being investigated for improper actions? Is money more important than health or human life?

Why do Government leaders from the President down to local Transportation Managers choose to ignore proven and successful (CARB) methods they have been aware of for years? NASA, US Border Patrol, Homeland Security, US Army, 200++ School Districts and multiple Cities have been reducing Pollution and saving their Taxpayers money.

Electric may be the future, when will an electric Truck be able to transport an 80,000 load? Right now smaller Electric vehicles have a range of less than 400 miles. Transport and Delivery Trucks account for +/-70% of the Carbon Pollution/Particulates released into the atmosphere.

To create a Lithium Battery more Pollution is created than a vehicle omits in 3 years. Today's opportunity; reduce Fuel Consumption, Maintenance Expenses and Downtime by improving fuels combustibility.

The ECO Fuel System works on the Scientific Principal of Electrolysis, No Chemicals, No Maintenance and it can last 20+ years, CARB Approved. REDUCE Carbon Pollution (50%+ TODAY) it is easy to install, low in cost and will work on current vehicles of all fuel types. The ECO is only a few hundred dollars. It has a 90 day No Risk Money Back Guarantee. For information or to schedule a test, go online <https://ecofuelmax.com>, (866) 374-0002
